Professional Summary

Full Stack Developer with strong focus on backend systems, scalability, and system design.

Experienced in building production-grade applications using Node.js, Express.js, MongoDB, and Redis, with hands-on implementation of real-world concepts like authentication, caching, API integrations, and deployment.

Built full-stack applications with secure authentication, database-driven workflows, responsive UI, and scalable backend architecture.

Passionate about backend engineering and designing efficient, reliable, and maintainable systems.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript
- **Frontend:** React.js, Next.js, Tailwind CSS, Responsive Design
- **Backend:** Node.js, Express.js, GraphQL
- **Databases:** MongoDB, Redis
- **Tools & Platforms:** Git, GitHub, Docker, PM2, Nginx, VS Code, Postman
- **Cloud & APIs:** AWS S3, Stripe, Razorpay, Cloudinary, Vercel, Netlify
- **Core Concepts:** System Design Basics, REST/GraphQL APIs, Authentication & Authorization, Caching, Concurrency Handling, MVC Architecture

Projects

Finance Tracker – Full Stack Personal Finance Management App

[GitHub](#)

Full-stack finance management application with authentication, dashboard analytics, income tracking, expense tracking, and budget monitoring

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT, Tailwind CSS

- Designed and developed a full-stack finance tracker application using React.js, Node.js, Express.js, and MongoDB
- Built secure user authentication using JWT for protected dashboard access
- Implemented income, expense, and budget management features with database-driven CRUD operations
- Designed a responsive dashboard interface to display financial overview, budget progress, and transaction data
- Integrated backend APIs with frontend using Axios and handled real-time form validations and error responses
- Worked on production deployment, CORS configuration, environment variables, and frontend-backend API connection

Experience & Contributions

- Built and deployed full-stack applications with real-world features like authentication, dashboard analytics, file uploads, API integrations, and contact systems
- Designed modular and scalable frontend and backend architectures using React.js, Node.js, Express.js, and MongoDB
- Improved application performance using optimized API calls, reusable components, and clean state management
- Worked with asynchronous operations, database queries, deployment issues, CORS handling, and production debugging
- Followed clean code practices, modular folder structure, environment variable management, and Git-based workflows
- Developed multiple assignment-based and portfolio-level projects with production-focused implementation

Additional Skills

- Understanding of system design fundamentals and backend architecture
- Familiar with headless CMS concepts and reusable content structures
- Currently exploring Contentful / Builder.io and modern headless CMS platforms
- Strong problem-solving ability and quick learner
- Comfortable debugging frontend, backend, deployment, and API integration issues

Education

Bachelor of Computer Applications

Indira Gandhi National Open University

Relevant Coursework: Database Management Systems, Computer Networks, Data Structures

Completed

2025
